

2022
Q4

Safety Statistics

Information reported is a combination from Alberta Mine Safety Association Membership. Stats from Syncrude, Big Horn Mining, Suncor Fort Hills, and KMC Mining have not been received.

2022 Mine Safety Stats

	Hours	FA	MA	LTI	TIF	RIF
Q1	8,693,535	133	17	2	3.50	0.44
Q2	8,891,964	127	19	1	3.31	0.45
Q3	8,814,473	143	15	4	3.68	0.43
Q4	9,273,634	113	31	3	3.17	0.73

Error in hours reported. Updated March 2023

Q4 Trends + Learnings

Vehicle airbags will not trigger if the seatbelts are not worn. Drive to conditions on snow covered roads.

Focus on proper tools and PPE to prevent hand injuries.

Ongoing work with contractors who have provided actions plans to reduce injuries.

Monthly Focus Items - Winter Readiness / Risk Tolerance / Finish Strong

Current Trends - Procedural Deviations / Situational Awareness

Items for Refocus - Incident Learnings following Safe Work Practices / Job Hazard Assessment - STOP & THINK, Refocus Meetings pertaining to incident trends and working plans, accountability, interventions peer to peer

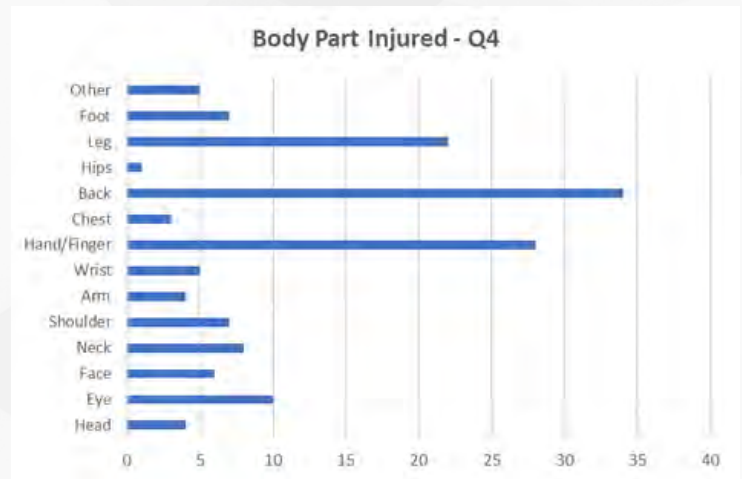

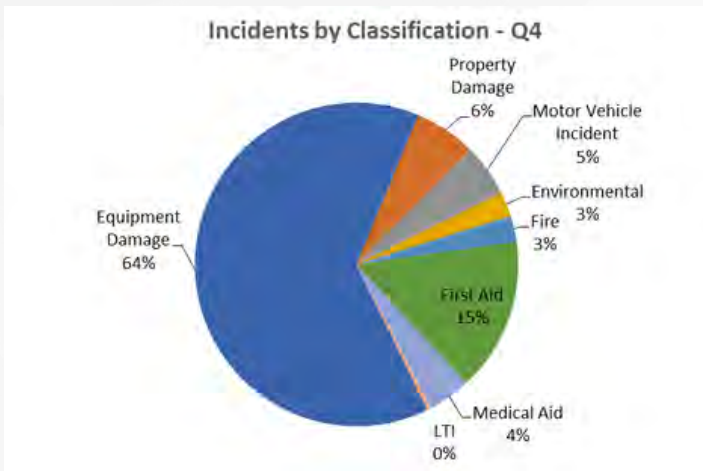

Learnings and areas of improvement - applied from Items of refocus

Sprains/strains from rough roads and jarring, exhaust exposure from leaks in haul trucks

Significant drop in the number of overall injuries in Q4 due to additional focus placed on specific tasks and conditions (i.e. mounting/dismounting, ground conditions) that lead to injuries caused by slips, trips and falls and to line of fire (pinch points) conditions that lead to hand and finger injuries. Increase in the number of minor equipment damage events. A number of significant equipment damage events occurred in 2022 and are attributed to equipment contact due to a failure to follow proper procedures, new employees to the oilsands and complacency.

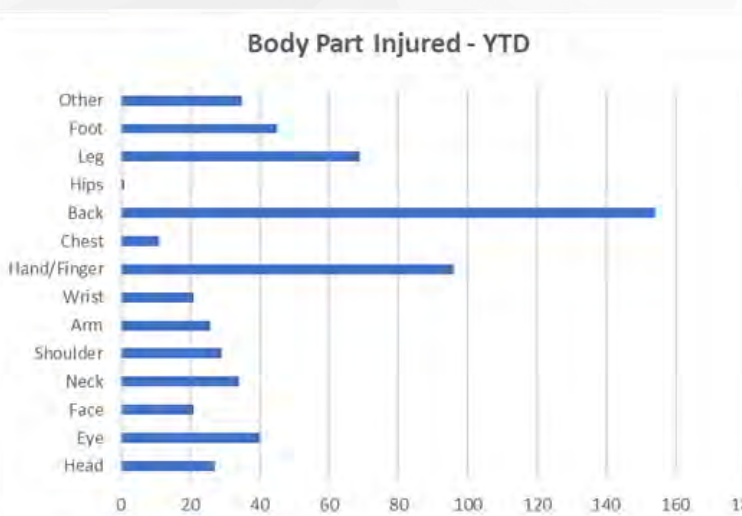

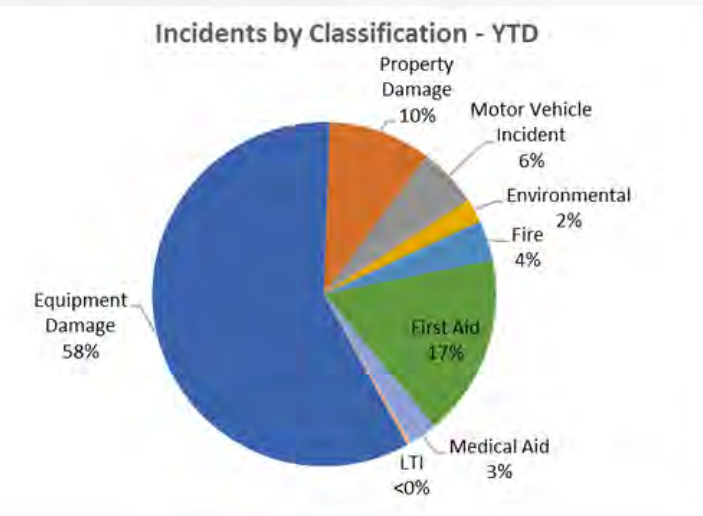

High Potential Near Miss - A cable tractor tipped over when the operator backed up and over a slope. This was reported to OHS as "a vehicle that goes out of control"

Quarterly Breakdown
